

## **The False Human History, an Archeological View**

*by Potluri Rao In Seattle ©2018 (CC BY 4.0)*

The current version of human history was written by people who lacked scientific skills. It was the history of European cultures that evolved only recently, after the glacial melt, from Stone Age.

Long before the Stone Age cultures of Europe came into existence, some Homo Sapiens voluntarily left Ethiopia (Africa), 100,000 years ago, and moved east to India and Sunda. They lived only in the Tropical Zone, along the Equator, along perennial rainwater rivers. They were warm and toasty. They never heard of Ice Age or Stone Age. They had nothing to do with the Homo Sapiens of Africa or Europe. They evolved as a distinct category of Homo Sapiens of advanced logic based cultures. They painted caves in Sunda 50,000 years ago. They had superb artistic skills.

Unfortunately, the ancient advanced peace loving cultures of the Asia Homo Sapiens were deliberately and totally destroyed by the recent primitive warmongering Homo Sapiens of Europe. Getting rich by robbing and destroying other cultures was the political philosophy of the Europe Homo Sapiens.

The Asia and Europe Homo Sapiens evolved to be the exact opposite cultures. They evolved in different Climate Zones.

The current version of human history was written by Europeans of the Glacial Zone, from their perspective. It was the history of Europe Homo Sapiens.

The following is a short list of research papers that expose some of the false assumptions of the current human history. Each link opens an appropriate paper.

### [01 Sunda cave art](#)

Advanced logic based Asia Homo Sapiens lived on this planet long before the European cultures evolved from the Stone Age. They lived in the Tropical Zone, along the Equator. The Sunda cave art of superb artistic skills was painted 50,000 years ago.

### [02 Yamuna is a rainwater river](#)

The Yamuna is a perennial rainwater river, a unique geological wonder. It has inexhaustible supply of rainwater under all climatic conditions. Some Homo Sapiens

discovered the secret and made it their home. They lived only along rainwater rivers in the Tropical Zone. They discovered a continuous rainwater path from the Red Sea to Yamuna to Sunda.

### [03 Indus was avoided like the plague](#)

The Homo Sapiens who moved to the Yamuna avoided the Indus river of snowmelt water like the plague, for a good reason. The Indus was unstable and flood prone. It literally swallowed anyone who dared to settle along the river.

### [04 Thar desert was a fertile valley](#)

The Thar desert between Balochistan and India, also known as Punjab, was a fertile valley, 60,000 years ago. It attracted the Asia Home Sapiens. The people in Punjab were forced to move east to Sunda, along the Yamuna, when it became the Thar desert.

### [05 Red Sea was a lake, not a sea](#)

The Red Sea was a giant freshwater lake, Oasis, until as recently as 10,000 years ago. It was a fertile valley that attracted the Asia Homo Sapiens from Ethiopia (Africa). Homo Sapiens moved from the Oasis to Balochistan to Punjab to Yamuna to Sunda.

### [06 Persian Gulf was the Tigris river](#)

Until 10,000 years ago, the current Persian Gulf was the Tigris river valley with perennial rainwater rivers. It was the cradle of the Asia Homo Sapiens. Some of the Homo Sapiens moved east to Sunda.

For 100,000 years, the Asia Homo Sapiens lived in the tropical climate from the Red Sea to Sunda. They were a distinct category, the Asia Clade. They were the cream of human kind. They had nothing to do with the Homo Sapiens of Africa or Europe. Their story was never recorded. Unfortunately, their cultures were deliberately and totally destroyed by the Europe Homo Sapiens.
