

The False Human History, an Archeological View

by Potluri Rao In Seattle ©2018 (CC BY 4.0)

The current version of human history was written by Europeans who lacked scientific skills. It was the history of European cultures that evolved only recently, after the glacial melt, from Stone Age to Iron Age. They were unaware of the advanced cultures that existed before.

Long before the Stone Age cultures of Europe came into existence, a subgroup of Homo Sapiens voluntarily left Africa, 100,000 years ago; they were the Asia Clade. They evolved as an independent category. They painted caves in Sunda, 50,000 years ago. They discovered a continuous perennial rainwater path from Ethiopia to Balochistan to Punjab to Sunda to China.

Unfortunately, the ancient advanced peaceful cultures were deliberately and totally destroyed by the recent primitive Europeans who were constantly at war to rob each other. Getting rich by robbing and destroying other cultures was their political philosophy.

The current version of human history was written by Europeans based on a set of false assumptions. They misinterpreted evidence to fit their pet theories. Human history based on correct assumptions and proper scientific methodology is yet to be written.

The following is a short list of research papers that expose some of the false assumptions. Each link opens an appropriate paper.

[01 Sunda cave art](#)

Humans existed on this planet long before the European cultures evolved from the Stone Age. The Sulawesi cave art of superb artistic skills was painted 50,000 years ago.

[02 Yamuna is a rainwater river](#)

The real Yamuna is a rainwater river. It goes from the Aravalli range of the Thar desert to the Satpura range of the Vindhya. It collects rainwater from the Trikuta basin located between the two ranges. The Yamuna is a unique geological wonder. It has inexhaustible supply of rainwater under all climatic conditions. Homo Sapiens discovered the secret 60,000 years ago and made it their home.

[03 Indus was avoided like the plague](#)

The Homo Sapiens that lived along the Yamuna 60,000 years ago avoided the Indus river of snowmelt water like the plague, for a good reason. The Indus was unstable and flood prone. It literally swallowed anyone who dared to settle along the river, at frequent intervals. The Indus was a vast wasteland until Europeans migrated to India, 4,000 years ago, from Bactria to Kashmir.

[04 Thar desert was a fertile valley](#)

The Thar desert between Balochistan and India, also known as Punjab, was a fertile valley, 60,000 years ago. It became a desert 40,000 years ago. All the people in Punjab moved to Sunda.

[05 Red Sea was a lake, not a sea](#)

The Red Sea was a giant freshwater lake, Oasis, until as recently as 10,000 years ago. It was a fertile valley that attracted Homo Sapiens from Ethiopia, 100,000 years ago. Humans moved from the Oasis to Balochistan to Punjab to Yamuna to Sunda.

[06 Persian Gulf was the Tigris river](#)

Until 10,000 years ago, the current Persian Gulf was the Tigris river valley with perennial rainwater. It attracted Homo Sapiens from Ethiopia 70,000 years ago.

For 100,000 years, during the Ice Age, Homo Sapiens lived in the tropical climate from the Red Sea to China. They were the Asia Clade, a distinct category of Homo Sapiens with their own culture. They lived only to the south of the Yamuna river of rainwater (Tropic of Cancer). They had nothing to do with the Homo Sapiens that lived in Africa or Europe.
