Contrary to the claims by linguists, the Sanskrit language did not exist before the Greeks occupied Kashmir around 200 BCE. Linguists who lacked scientific skills falsely assumed that the Avestan language of South Bactria (Avesta) was Sanskrit.

South Bactria (Avesta) was occupied by Persians, DNA R1a1, only 3,000 years ago. Some Persians called themselves Iranians (Aryans). There were two subgroups of Aryans in the Avesta: Asura and Deva. Genetically, Deva were DNA R1a1-a1h, commonly known as Z93. Asura people worshiped Ahuramazda; Deva people worshiped Vishnu, Shiva, and Indra. Asura hated Deva. Xerxes, an Aryan king, kicked all Deva people from Avesta to Kashmir. Devas are currently known as Kashmiri Pandits. Around 500 CE, Muslims occupied Avesta. Asuras escaped Muslim persecution and sought refuge on the west coast of India; they are currently known as Parsis. Parsis and Kashmiri Pandits are recent Avestan refugees in India. Sanskrit was a synthetic language with artificial rules of syntax and grammar invented by the Greeks. In the Sanskrit fictional stories, Devas were gods and Asuras were demons. All Sanskrit literature was recent fiction, falsely promoted by the Greeks as sacred Hindu texts for commercial gain. It was the forbidden Deva snake oil of Avesta dressed in Sanskrit clothes. The British colonialists, linguists, and missionaries actively promoted the Greek rubbish as the ancient Hindu civilization to enslave Hindus.
