There are many research papers based on Indian DNA samples, available at the link [Genographic Research](#). They have a fascinating story to tell of the ancient human history. They contradict what is currently taught as the human history.

People who share the same DNA belong to a Haplogroup. Haplogroups are categorized from A to Z. The Haplogroups C and F are the Asians, a distinct category of Homo Sapiens. They were advanced logic-based cultures. They voluntarily moved out of Ethiopia (Africa), 100,000 years ago. They had nothing to do with the Homo Sapiens of Africa or Europe. They lived only in the Tropical Zone, around the Equator, warm and toasty. They never heard of Ice Age or Stone Age.

The following short list of papers are arranged in a sequence as an introduction to the history of the Asia Homo Sapiens. Each link opens an appropriate paper.

[01 Sunda cave art](#)

Fifty thousand years ago, the Asia Homo Sapiens painted caves in Sunda (Indonesia), along the Equator. The paintings were superb in style, composition, narration, and content. They are a solid proof that Homo Sapiens lived in the now submerged Sunda.

[02 People in Punjab](#)

Sixty thousand years ago, the current Thar desert, between Pakistan and India, was a fertile valley that attracted Homo Sapiens from Ethiopia (Africa). It was Punjab. People in Punjab followed the Yamuna river to reach Sunda.

[03 People in Balochistan](#)

Seventy thousand years ago, Punjab (Thar) and Balochistan (Pakistan) were fertile valleys. People lived in Balochistan for thousands of years before they discovered a mountain pass and moved to Punjab.

[04 People in the Red Sea](#)

Eighty thousand years ago, the current Red Sea was a giant rainwater lake, an oasis. Homo Sapiens from Ethiopia (Africa) were attracted to the oasis.

## 05 Hindu people

Asia Homo Sapiens left Ethiopia (Africa), 100,000 years ago. They lived along the path Ethiopia to Red Sea to Balochistan to Punjab to Sunda. They lived only in the Tropical Zone. They never heard of Ice Age or Stone Age. Twenty thousand years ago, the glaciers started to melt and the original homelands of the Asia Homo Sapiens were submerged. Some Homo Sapiens moved to China, and the rest moved to India. The Homo Sapiens in India were the Hindu.

Culturally, the Asia and Europe Home Sapiens were the exact opposites. They evolved in different Climate Zones.

The history of the Asia Homo Sapiens was never recorded. Unfortunately, their cultures were deliberately and totally destroyed by the Europe Homo Sapiens who moved to Asia only four thousand years ago.
