

## The False Human History, an Archeological View

What is currently taught as the human history is the story of Europeans constantly at war to rob each other, to get rich. The word History has become synonymous with a catalog of who won which war, how much was plundered, and how many were slaughtered.

Europeans evolved only 10,000 years ago, after the glacial melt, from the Stone Age people. They were the Europe Homo Sapiens.

Modern Humans, Homo Sapiens, evolved in Africa, 200,000 years ago. They were split into different Clades: (1) Africa, (2) Nile, (3) Europe, and (4) Asia.

The world consists of two different climate zones: (1) Tropical, and (2) Glacial. In the Tropical Zone, around the Equator, there were no glaciers. It was always the same climate. It had no Ice Age or Stone Age.

The Homo Sapiens who lived to the east of the Red Sea, in the Tropical Zone, were the Asia Clade; some lived in India, and the rest moved to China.

The Asia Clade voluntarily left Africa 100,000 years ago. They were advanced logic based culture of visionaries, explorer, and pioneers that searched far and wide for life sustaining perennial rainwater resources. They were compassionate peace loving people, never had a war or god. They lived in peace and tranquility. They had abundant supply of food resources. They spent their time in cultural enrichment. They produced superb artwork, in the caves of Sunda (Indonesia), 50,000 years ago.

Unfortunately, the history of the Asia Clade was deliberately and totally destroyed by the recent primitive warmongering Europeans who entered Asia, after Alexander (300 BCE). The Greeks invented a fictional history in the style of European warmongers. They believed that all Homo Sapiens evolved in the same style as Europeans to rob each other. The Greek rubbish was a collection of non-verifiable and nonsensical statements that reduce to ashes when exposed to logic. The archeological evidence contradicts the European version of human history.

The Homo Sapiens that lived in India were the Hindu. The following is a short list of research papers that expose some of the false assumptions of the current European version of human history. Each link opens an appropriate paper.

### [01 Sunda cave art](#)

Advanced logic based Homo Sapiens lived on this planet long before Europeans evolved from the Ice Age and Stone Age. The Sunda (Indonesia) cave art of superb artistic skills was painted 50,000 years ago.

### [02 Yamuna is a rainwater river](#)

The Yamuna is a perennial rainwater river. It connected Punjab (Thar desert) to Sunda.

### [03 Indus was avoided like the plague](#)

The people who lived along the Himalayas and the Indus river were the European warmongers who entered India only 4,000 years ago. Hindu avoided the Himalayas and its rivers like the plague. They lived only along rainwater rivers.

### [04 Thar desert was a fertile valley](#)

The current Thar desert between Balochistan and India, also known as Punjab, was a fertile valley. It attracted Hindu, from Ethiopia.

### [05 Persian Gulf was the Tigris river](#)

Until 10,000 years ago, the current Persian Gulf and Gulf of Oman were fertile valleys.

### [06 Red Sea was a lake, not a sea](#)

Until 10,000 years ago, the Red Sea was a giant freshwater lake. Hindu discovered the lake 100,000 years ago.

Hindu moved from Ethiopia to the Red Sea to the Persian Gulf to Punjab to Sunda. They painted the Sunda caves 50,000 years ago. They left Ethiopia 100,000 years ago. They had nothing to do with the Africa or Europe Homo Sapiens.
