Hindus (DNA F) are Asian Homo Sapiens. They had nothing to do with the African or European Homo Sapiens. They voluntarily left Ethiopia (Africa) 100,000 years ago and followed the monsoon winds from the Arabian Sea to the Bay of Bengal. They lived in the currently submerged Persian Gulf from 80,000 BCE to 10,000 BCE.

Not all of Asia was suitable for human habitation. The land above the treeline (1,000') was not arable. The following map is a digital reconstruction of the landscape to depict the habitable areas. Only the areas with the colors light blue, green, yellow, and orange were suitable for habitation. Detailed elevation maps of the monsoon path revealed a fascinating story of the now lost human history. Hindus lived only in the lowlands. They were highly advanced logic-based cultures. They sent out scouts far and wide in search of habitable lands. They avoided the Indus River of snowmelt water that was flood-prone and unstable. They lived only in the lowlands of perennial rainwater rivers along the monsoon path. The maps helped us trace the migration path of Hindus from Somalia to Tamil Nadu. Hindus lived in Peninsular India for over 60,000 years. Unfortunately, the history of Hindus was lost.
