Genetically, Hindu the native Indians, are the DNA F. They lived in the peninsular India, to the south of Tropic of Cancer, for over 60,000 years. They were advanced logic based cultures of visionaries, explorers, and pioneers. They voluntarily left Ethiopia (Africa) 100,000 years ago, in search of life sustaining dependable perennial rainwater resources. They discovered a continuous path of perennial rainwater rivers from Ethiopia to India. They were warm climate people. They avoided the Himalayas and its silt laden snowmelt water rivers like the plague.

Much of the current Indian literature, marketed as the Hindu culture, is rubbish invented by the Greek colonialists. It reduces to ashes when exposed to logic.

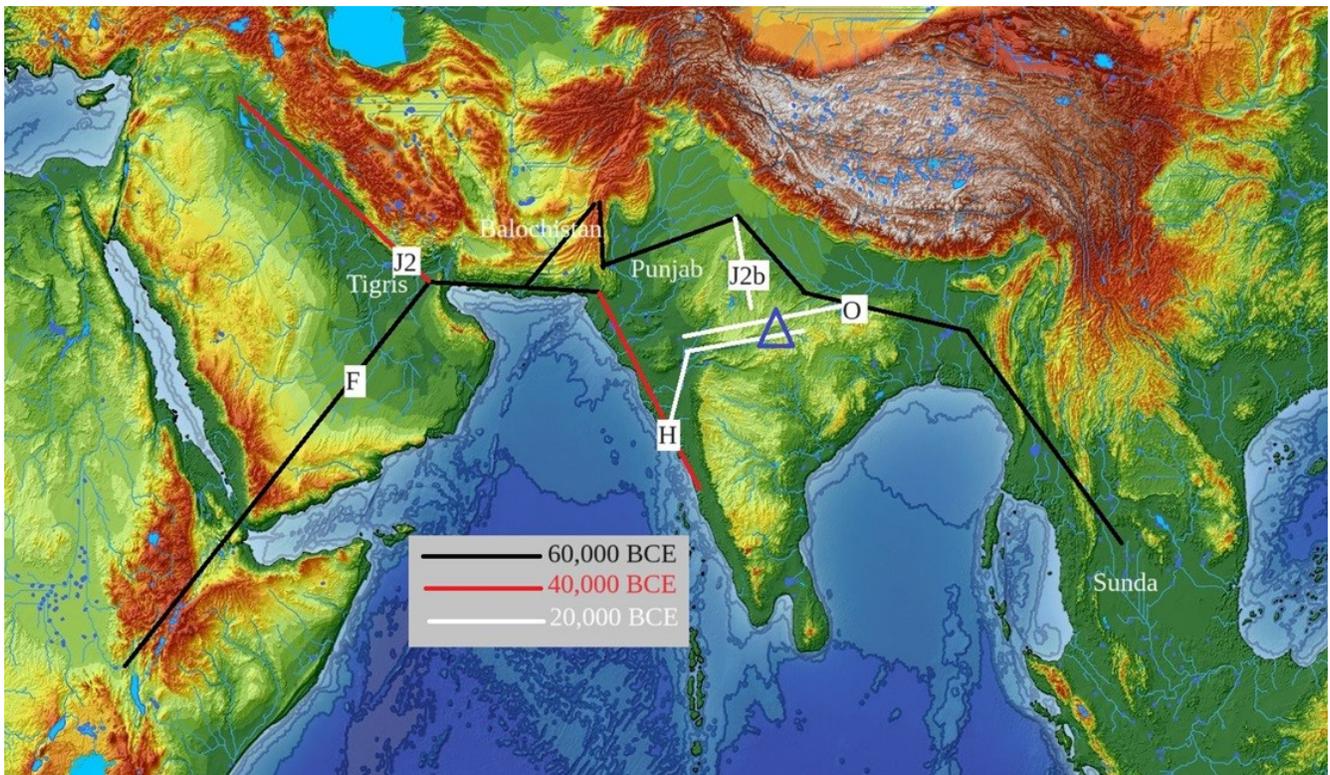

Idolatry was a Greek invention. It never existed in India before the Greeks. Hindu never had a war or god. They were compassionate peace loving people.

The Greek colonialists hired unethical Persians called Brahmin, to trash the Hindu literature to worship manuals of Persian gods of the Zend Avesta. Vishnu, Shiva, and Indra were Brahmin gods of Avesta (South Bactria). Hindu never had gods; they were logic based. Brahmin were delusional; they never had any intellect or logic. The recent Greek financed Brahmin rubbish was falsely attributed to antiquity, and actively promoted as the history of Hindu people.

An analysis of DNA samples of the Indian populations revealed that Hindu (F) lived only to the south of Tropic of Cancer, and Europeans (R1) lived only to the north of Tropic of Cancer. The F and R1 were different categories of Homo Sapiens. The F were Asia Homo Sapiens, and the R1 were Europe Homo Sapiens. Culturally, the F were warm climate people who followed Homo Erectus to Asia, and the R1 were cold climate people who followed Homo Neanderthal to Europe.

The F never had a war or god; they lived in a land of abundant supply of food. The R1 were constantly at war to rob each other; they lived in a land of scarce food. All the stories of the warmongering gods and demons were the R1 culture.

The map below is a computer generated landscape before the glacial melt of 20,000 BCE, when much of the world was covered with glaciers, and the seawater was far below the current levels.

The black line in the map was a path of continuous perennial rainwater rivers. The F, and Homo Erectus before them, lived only along the black line. The F left Ethiopia 100,000 years ago. We have solid proof that they painted caves in Sunda 60,000 years ago. The Java Man of Erectus was found near the cave art.

Every twenty thousand years, monsoon winds change direction based on the earth's rotation called Precession. Sixty thousand years ago, the current Thar desert was a fertile valley called Punjab. The F discovered a mountain pass in Balochistan and moved to Punjab. From Punjab, they followed the Yamuna river to Sunda. They left their signature on walls of the Sunda caves.

Forty thousand years ago, the monsoon winds changed direction and Punjab became a desert. Some of the F were forced to move south along the West Coast of India to the Narmada river delta. The Narmada is a rainwater river. They avoided the Indus of snowmelt water like the plague.

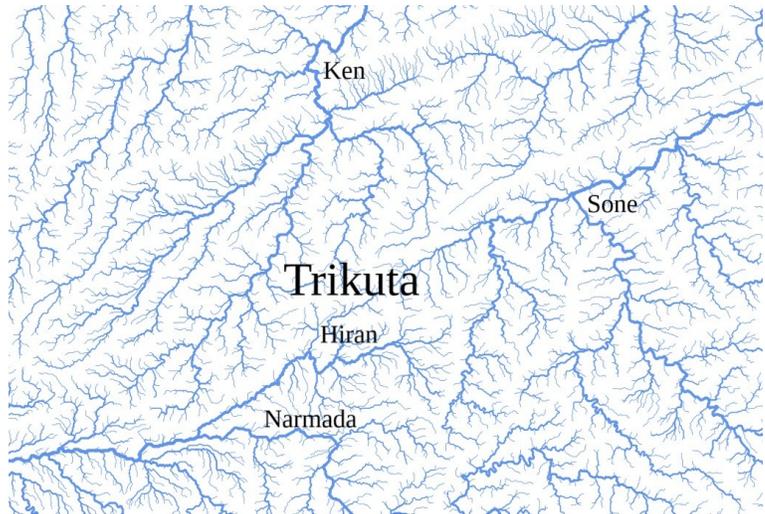

The H, O, and J2 were subgroups of the F. Forty thousand years ago, the people in Sunda were the O, in the Narmada delta were the H, and in the Tigris were the J2. Balochistan, Punjab, and Yamuna were vacated.

Twenty thousand years ago, the monsoon winds changed direction and the desert became a fertile valley again. A subgroup of the J2 in the Tigris, called J2b, followed the old migration path to reach Punjab.

Twenty thousand years ago, the glaciers started to melt and the rising sea levels swallowed much of the land. The Narmada delta, Sunda, and Tigris were submerged under 500 feet of water. The H and O were forced to move to the mainland along the white lines.

The J2b in Punjab moved to the Trikuta, along the Ken river, when Punjab turned into the current Thar desert.

The three rivers Narmada (H), Sone (O), and Ken (J2b) originated at the foot of the Mt. Trikuta and dispersed in different directions. There were giant reservoirs surrounding the Trikuta with inexhaustible supply of rainwater that fed the rivers year round even during the frequent droughts.

The three subgroups of the F (H, O, J2b) reached the Trikuta, 20,000 years ago. They were Hindu, the native Indians. They were the only people on the entire subcontinent until the Europeans (R1) moved south to Bactria to Kashmir to the Indus river, 4,000 years ago.

The R1 lived only along the Indus. They deliberately trashed the Hindu literature to worship manuals of the gods of Zend Avesta (South Bactria). In the Avestan language, Indus was called Sindhu. The people who lived along the Indus were Sindhu, not Hindu. Hindu lived only at the Trikuta for 20,000 years; they avoided the Indus like the plague. Sindhu and Hindu lived 1,000 miles apart, in different worlds. Hindu were warm climate Sapiens, and Sindhu were cold climate Sapiens.

Culturally, Sindhu (R1) were the exact opposite of Hindu (F). What is currently known as Hindu religion is in fact the Sindhu religion of the Zend Avesta gods Shiva, Vishnu, and Indra. Hindu never had a god or religion; they were logic based cultures.

The archeological evidence has a fascinating story of Hindu (F) to tell.
