Genetically, Hindu the native Indians, are the DNA F. They lived in the peninsular India, to the south of the Yamuna river, for over 60,000 years. They were advanced logic based cultures of explorers and pioneers. They voluntarily left Ethiopia (Africa) 100,000 years ago, in search of life sustaining dependable perennial rainwater resources. They discovered a continuous path of perennial rainwater rivers from Africa to India.

Much of the current Indian literature, marketed as the Hindu culture, is rubbish invented by the Greek colonialists. It reduces to ashes when exposed to logic.

Idolatry was a Greek invention. It never existed in India before the Greeks. Hindu never had a war or god. They were compassionate peace loving people.

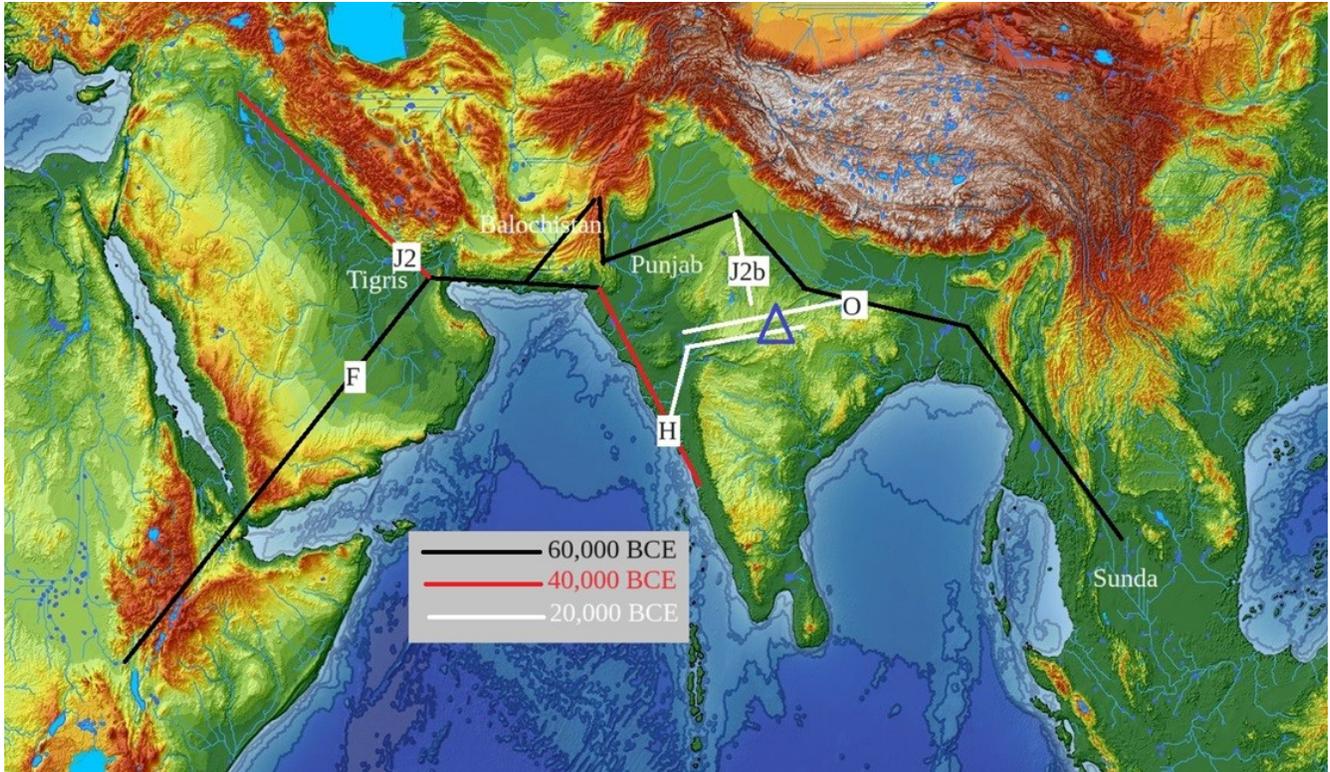

The Greek colonialists hired unethical Persians called Brahmin, to trash the Hindu literature to worship manuals of Persian gods of the Zend Avesta. Vishnu, Shiva, and Indra were Brahmin gods of Avesta (South Bactria), not Hindu gods. Hindu never had gods; they were logic based, and were the exact opposite of delusional Brahmin who never had any intellect or logic. The recent Greek financed Brahmin rubbish was falsely attributed to antiquity, and actively promoted as the history of Hindu people.

An analysis of DNA samples of the Indian populations revealed that Hindu (F) lived only to the south of the Yamuna river, and Europeans (R1) lived only to the north of the Yamuna river. The F and R1 were different categories of Homo Sapiens. The F were Asia Homo Sapiens, and the R1 were Europe Homo Sapiens. The F were warm climate people (Homo Erectus), and the R1 were cold climate people (Homo Neanderthal).

The F never had a war or god; they lived in a land of abundant supply of food. The R1 were constantly at war to rob each other; they lived in a land of scarce food. All the stories of the warmongering gods and demons were the Greek financed Brahmin rubbish, the R1 culture.

The map below is a computer generated landscape when much of the world was covered with glaciers and the seawater was far below the current levels.

The black line in the map was a path of continuous rainwater rivers. The F lived only along perennial rainwater rivers. They left Ethiopia (Africa) 100,000 years ago. We have solid proof that they painted caves in Sunda 60,000 years ago.

Every twenty thousand years, monsoon winds change direction based on the earth's rotation called Precession. Sixty thousand years ago, the current Thar desert was a fertile valley called Punjab. The F discovered a mountain pass in Balochistan and moved over to Punjab. From Punjab, the F followed the Yamuna river to the Bay of Bengal (Sunda). They left their signature on walls of the Sunda caves.

Sixty thousand years ago, the F lived only along the black line, from Ethiopia to Sunda.

Forty thousand years ago, the monsoon winds changed direction and Punjab became a desert. The F were forced to move south along the West Coast of India to the Narmada river delta. The Narmada is a rainwater river. They did not follow the Indus because it was not a rainwater river. They avoided it like the plague.

Forty thousand years ago, the people in Sunda were the O subgroup of the F, the people in the Narmada delta were the H subgroup of the F, and the people in the Tigris were the J2 subgroup of the F. Punjab and Yamuna were vacated.

Twenty thousand years ago, the monsoon winds changed direction and the desert became a fertile valley again. A subgroup of the J2 in the Tigris, called J2b, followed the old migration path to reach Punjab.

Twenty thousand years ago, the glaciers started to melt and the rising sea levels swallowed much of the land. The Narmada delta and Sunda were submerged under 500 feet of water. The H and O were forced to move to the mainland along the white lines.

Some J2b in Punjab voluntarily moved to the Trikuta along the Ken river. Eventually, Punjab turned into a desert.

The three rivers Narmada, Sone, and Ken originated at the foot of the Trikuta and dispersed in different directions. There were giant reservoirs surrounding the Trikuta with inexhaustible supply of rainwater that fed the rivers year round.

The three subgroups of the F (H, O, J2b) reached the Trikuta. They were the native Indians, Hindu. They were the only people on the entire subcontinent until the Europeans (R1) moved from Bactria, 4,000 years ago, and lived along the Indus.

The R1 lived only along the Indus. They trashed the Hindu literature to worship manuals of the gods of Zend Avesta (South Bactria). In the Avestan language, Indus was called Sindhu. The people who lived along the Indus (Sindhu) were Sindhu, not Hindu. They were unaware that Hindu (F) never lived along the Indus. Sindhu (R1) were the exact opposite of Hindu (F). In the Greek rubbish, Sindhu were falsely called Hindu.

Hindu (F) never lived along the Himalayas or Indus; they were warm climate people. They were rainwater people; they lived only along rainwater rivers. They avoided the snowmelt water rivers of the Himalayas like the plague. All the stories that glorified the Himalayas and its rivers belonged to the Sindhu (R1), not Hindu (F).

DNA samples of the Indian people have a different story of human history to tell. Hindu lived only to the south of Tropic of Cancer for over 60,000 years. They voluntarily left Ethiopia (Africa) 100,000 years ago. They were the Asia Homo Sapiens that followed Homo Erectus (black line). They painted the Sunda caves of superb artistic work 60,000 years ago. The Java Man of Erectus was found near the cave art.
