

The Thar desert, an Archeological View

It is generally taken for granted that the Sahara and Thar deserts were in existence forever. The false assumption led to misinterpretation of human history. The Thar and Sahara deserts alternated between fertile valleys and wastelands every twenty thousand years. Every forty thousand years they were fertile valleys that attracted humans.

The current Thar desert was a fertile valley twenty thousand years ago, and sixty thousand years ago. It is a wasteland today. It was a wasteland forty thousand years ago, and eighty thousand years ago. It will become a fertile valley again in twenty thousand years.

The alternating cycles of valleys and wastelands is caused by the earth's rotation called Precession. It creates glaciation cycles that cause sea levels to go up and down every twenty thousand years. Every twenty thousand years, the monsoon winds change their direction depending on the direction of sea levels. For twenty thousand years the winds go west to east, and the next twenty thousand years they go east to west.

The last switch in monsoon wind direction happened four thousand years ago, around 2,200 BCE to be precise. It was called the 4.2 Kiloyear event, because it happened 4,200 years ago. It resulted in a global drought that lasted for two hundred years. The entire population on the planet was rearranged to adjust to the shift.

Twenty thousand years ago, when the Thar was a fertile valley, the seawater was 500 feet below the current levels. There was no Persian Gulf, it was the Tigris river. The West Coast of India extended over 100 miles to reach the then Arabian Sea. It was called the Indus Fan. Sixty thousand years ago was a copy of the twenty thousand years ago. Forty thousand years ago it was the opposite, the Thar was a dessert, just like today. Sixty thousand years ago, the giant fertile lands of the Thar and Tigris attracted people from Africa.

People who share the same DNA are called a Haplogroup. Sixty thousand years ago, the people in the Thar valley were the C and O Haplogroups, and the people in the Tigris (Persian Gulf) were the F group.

The mountain ridge on the west side of the Red Sea separated West Africa from East Africa. Only the C, F, and O groups, who were advanced and logic-based cultures, figured out a way to reach the fertile valleys on the east side.

Humans migrated in search of dependable perennial rainwater resources. They figured out long ago that dependable rainwater was essential for self preservation. They searched far and wide to locate rainwater resources.

Sixty thousand years ago, when the C, F, and O sent out scouts, the Thar and Tigris had perennial rainwater rivers and lakes. The Indus is not a rainwater river, it was avoided like the plague.

Sixty thousand years ago, the C and O settled in the Thar valley, and the F settled in the Tigris (Persian Gulf). They were the only people to the east of the mountain ridge. Africa and the Tigris (Thar) were the only locations on this planet with human population. They had nothing to do with each other. They were separated by 3,000 miles with no communications or transportation facilities. They were different worlds.

Fast forward twenty thousand years. Forty thousand years ago, the Thar valley became a wasteland. The people moved east along the Yamuna river that originated in the Thar valley to reach the Bay of Bengal. The C and O lived in the Bay of Bengal, and the F lived at the Tigris (Persian Gulf). They were isolated with no communications.

Fast forward twenty thousand years. Twenty thousand years ago, the Thar became a fertile valley. A subgroup of the F at the Tigris moved along the old migration paths to reach the Thar valley. They were the Haplogroup J2b, also known as the Agni.

Fast forward fifteen thousand years. Five thousand years ago, there were signs all over that the Thar was becoming a wasteland again. The J2b figured it wise to move east along the Yamuna river in search of a dependable rainwater source. They found the Ken river that originated at the Mt. Trikuta with perennial rainwater.

The Thar valley was the home to two waves of the modern humans at forty thousand years apart, of twenty thousand years each. They were advanced logic-based cultures of adventurous pioneers who explored the world. They were the cream of the human kind. They lived in peace and tranquility. They were misinterpreted by the people who lacked scientific skills. Unfortunately, the ancient cultures were deliberately destroyed.

The earth's Precession is beyond our control. It dictated the now lost human history.
