Caste System was Invented by the Greek Colonialists

In India, before the Greeks (200 CE), there was no archeological evidence of Brahmin, Temples, or Caste System. Idolatry was a Greek invention. Greeks introduced idolatry to India to deliberately and totally destroy the logic-based Hindu cultures that lived in peace and prosperity for thousands of years. They robbed India blind. An analysis of DNA samples of Indian populations revealed an entirely different story of the ancient Indian history.

People who share the same DNA are called a Haplogroup. The current Indian population consists of only two major Haplogroups: (1) the F, and (2) the R1. The F is subdivided into the H, L, J2, O, and R2. The F lived in India, to the south of Delhi, in the peninsular India, for sixty thousand years. They were the native Hindu. The R1 were Europeans. They were subdivided into the R1a, R1a1, and R1b. They migrated south to India only four thousand years ago, and lived only to the north of Delhi. The F and R1 were unaware of each other until the Greeks occupied both sides of Delhi. They were the exact opposite cultures. The R1 worshiped war and god. The F never had a war or god. Fictional gods with supernatural powers was a European invention to rob each other.

Idolatry was a Greek invention. The Greeks invested in temples as a business. It was a highly profitable growth industry. They promoted local popular heroes to god status to occupy temples. They employed the delusional Persians (R1a1) to invent fictional stories of gods with supernatural powers.

The people who were employed in the Greek temple business were called Brahmin. The Greeks employed the native Hindu (F) and the delusional Persians (R1a1). Indian Brahmin were not a distinct class. They were anyone who volunteered to work for the Greeks. They were trained by the Greeks at an expense. They were mostly the F. The R1a1 were insignificant in number.

The Greeks invented the Caste System to keep their employees captive, to prevent them from leaving the temple business for better paying jobs in the productive sectors. Functionally, Brahmin were the indentured labor invented by the Greeks who invested in their training. Caste System was a Greek invention to get away with paying their employees minimum wages and deprive them of bargaining power and right to quit.

Abbreviations: Br, Brahmins; Tr, tribe; SC, Scheduled caste.

The above table is an analysis of DNA samples of people who claimed to be Brahmin. The Haplogroups C to O and the R2 were the Indians of the African origin, the F. The Haplogroups P to R1a1 were the recent European immigrants, the R1. The insignificant number of delusional Persians (R1a1) were imported by the Greeks at a great expense to train the majority of the Brahmin recruited from the local people, the F.

It is obvious that there is no logical relationship between the people who claimed to be Brahmin and their genetic origin. Caste System existed only in the Greek financed fictional stories invented by the delusional Persians (R1a1). It was falsely attributed to antiquity to pacify the underpaid Brahmin indentured labor force.

73 MARATHA	ΙE	MAH	CS	W	CS	16	1														3		1

The above table is an analysis of the people of the R2 of African origin. The R2 have dozens of separate castes. The castes do not intermarry or sit at the same table. I belong to the R2 group. I am intimately familiar with the caste categories selected for the study. It is a controlled experiment.

The O and R2 were siblings. The R2 moved south to the East Coast, starting near the Patna city (Bihar). They traveled along the states Bihar, Odisha (Orissa), Andhra, and Maharashtra. They are found only along this corridor.

Notice that the R1a1 were concentrated only in the Bihar and Odisha States, the area of Greek occupation. They were imported by the Greeks at a great expense. In India, some of them defected and claimed to be non-Brahmin, to seek employment in the productive sectors at higher wages. The Greeks lost their investment and had no legal recourse to recover their loss. They stopped importing R1a1. All the Brahmin were recruited only from the F. Currently, in India, there are more non-Brahmin R1a1 than Brahmin R1a1. It is obvious that at one time there was a mass defection that prompted the Greeks to invent the Caste System.

The above map is a computer simulation of landscape of sixty thousand years ago when much of the world was covered with glaciers. It shows the migration path of the F from Africa to the peninsular India. The H, L, O, R2, and J2b are subgroups of the F. They were forced to move out of the West Coast when the glaciers started to melt and their native land was submerged.
