

The Indian People, an Archeological View

The current political boundaries of India were established by the Greeks, to represent their occupied territory. It is the Greek India, not the ancient India. The ancient India of Hindu existed only to the south of the Yamuna river, the peninsular India. The area to the north of the Yamuna had no human population until the recent European immigrants entered India, from Bactria, four thousand years ago. The Europeans and Hindu were unaware of each other until the Greeks occupied both sides.

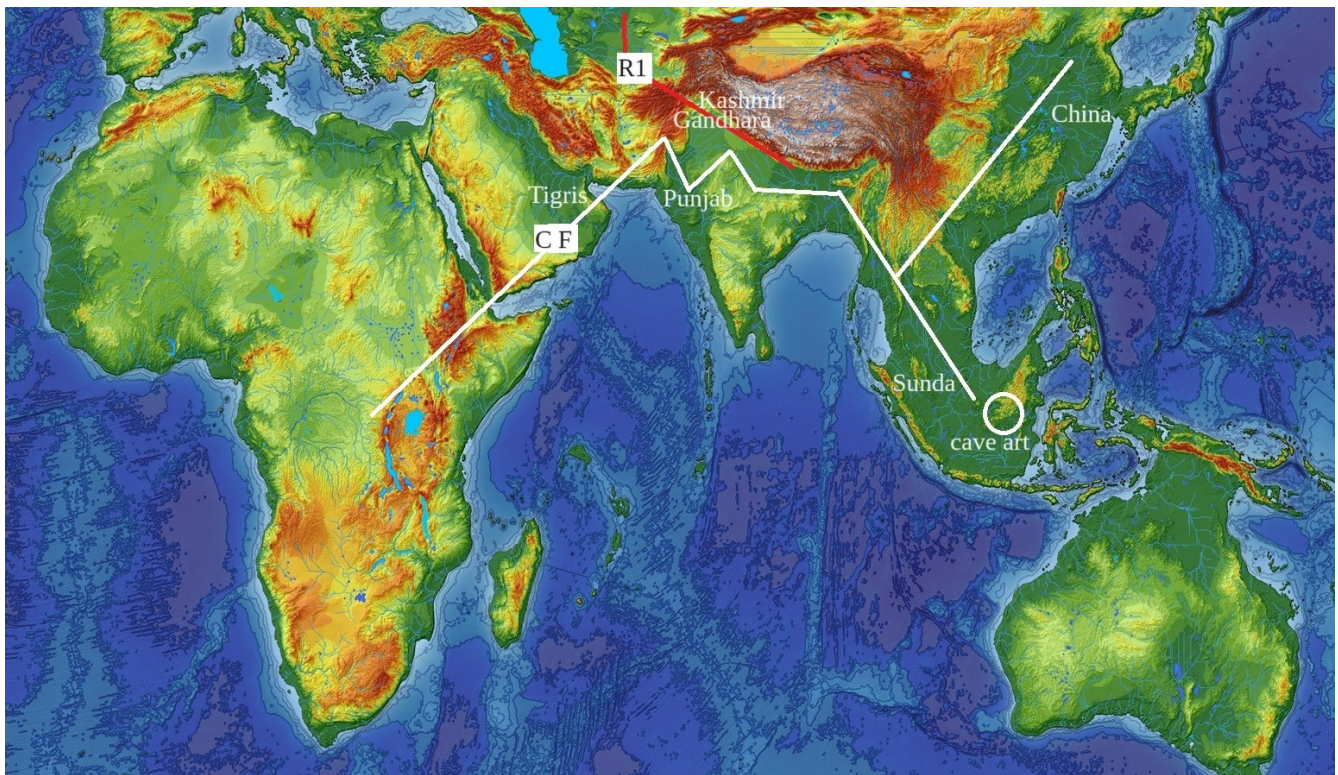

Genetically, Hindu were the DNA C and F, and Europeans were the DNA R1. The C and F were the Asia Clade, and the R1 were the Europe Clade. The Asia Clade is a branch of the Africa Clade that evolved 200 thousand years ago in the Central Africa. The Europe Clade evolved only ten thousand years ago, in the Russian Steppe, after the glacial melt, from a primitive Stone Age hunters and gatherers.

People in the Greek India were two distinct categories of humans, separated by geography. The Europeans were warmongers, constantly at war to rob each other. Hindu were compassionate, never had a war or god. Before the Greeks, the Europeans (R1) and Hindu (C, F) never lived as one people.

The current version of humans evolved in the Central Africa 200 thousand years ago. One hundred thousand years ago, a subgroup of them, the Asia Clade, migrated to India. They voluntarily left Africa in pursuit of life sustaining rainwater resources. They scoured far and wide for perennial rainwater and established a migration path from Africa to China. They lived only along the rainwater path for one hundred thousand years. They were an advanced logic-based culture that discovered the path. They were peace-loving compassionate people who never had a war or god. They were Hindu, the rainwater people. They lived only to the south of the Yamuna river.

During the Ice Age, Europe was covered with glaciers. After the glacial melt, Europe was a swamp called the Russian Steppe. Gradually, some primitive humans followed the grazing animals to the Steppe. They were the Stone Age Europeans. Over time, they evolved into the current European Clade.

The European cultures evolved only six thousand years ago. They lived in a land of scarce food. They formed into rival packs to rob each other. The European history is that of constant war. They were the uncivilized who glorified themselves as the civilized. Hindu (C, F) never had a war in hundred thousand years.

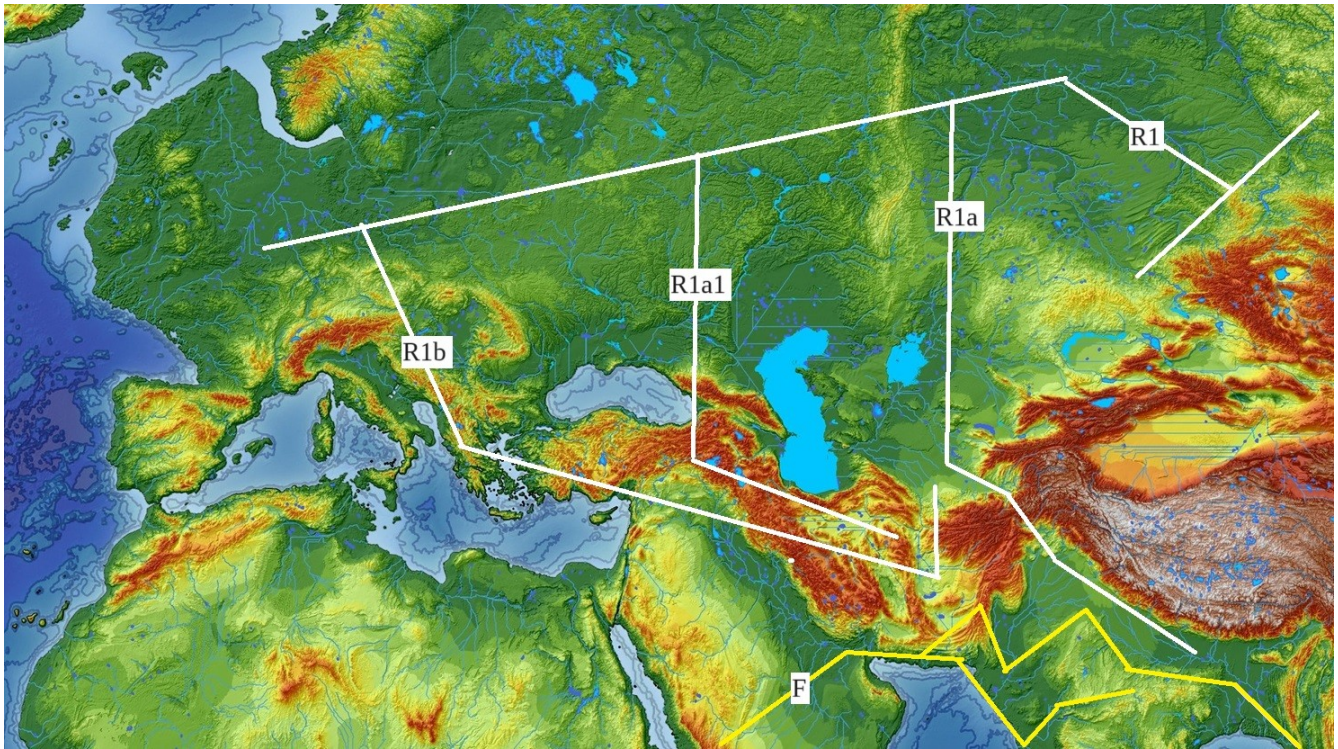

The above map is a computer simulation of the landscape before the glacial melt. At the time Hindu (C, F) moved from Africa to India, the Red Sea was a lake, the current Persian Gulf was the Tigris river, the current Thar desert was Punjab, and the land from Bangladesh to Australia was a giant fertile valley called Sunda. We have solid proof (see [Sunda cave art](#)) that the C painted caves in Sunda fifty thousand years ago. They were in Punjab sixty thousand years ago. They were in Tigris seventy thousand years ago. They were in the Red Sea Eighty thousand years ago.

The R1 evolved in Europe only after the glacial melt. Europe was a swamp before ten thousand years ago. Primitive Stone Age people occupied Europe ten thousand years ago. They moved south to India, along the red line, four thousand years ago. They lived only along the Himalayas.

Hindu (C, F) lived in the peninsular India (Ancient India) for sixty thousand years before the Europeans (R1) entered Kashmir from Bactria.

Hindu were rainwater people. They lived only along the rainwater rivers and lakes. They avoided the Himalayas and its rivers like the plague. There was a continuous perennial rainwater path from Africa to China with abundant supply of food. The Asia Clade discovered the path one hundred thousand years ago.

The above map is a detailed view of the landscape of Europe at the time of the glacial melt. The R1 evolved out of primitive Stone Age hunters and gatherers only ten thousand years ago. They migrated west to reach the Mediterranean Sea.

Four thousand years ago, there was a global drought that lasted for almost two hundred years. The R1 were forced to move south.

The R1 converged to Bactria. In Bactria, they discovered a mountain pass and moved to Kashmir. From Kashmir, they moved to Gandhara. From Gandhara, they moved along the Himalayas. They lived only along the Himalayan ridge, along the rivers Indus, Sutlej, Ganges, and Ghaghara. They were unaware of the rainwater rivers of the Hindu. They were the warmongering Europeans, constantly at war to rob each other.

What is currently promoted as the Indian history was the history of the warmongering R1 along the Himalayas. It had nothing to do with Hindu.

The history of Hindu, the natives of the peninsular India, was never recorded.
